General Specifications

EJA210E Flange Mounted Differential Pressure Transmitter

GS 01C31C01-01EN

The high performance flange mounted differential pressure transmitter EJA210E can be used to measure levels of densities of solidifying or precipitating liquids. EJA210E outputs a 4 to 20 mA DC signal corresponding to the measured differential pressure. Its accurate and stable sensor can also measure the static pressure which can be shown on the integral indicator or remotely monitored via BRAIN or HART communications. Other key features include quick response, remote set-up using communications and self-diagnostics. FOUNDATION Fieldbus and PROFIBUS PA protocol types are also available. All EJA-E series models in their standard configuration, with the exception of the Fieldbus and PROFIBUS types, are certified as complying with SIL 2 for safety requirement.

■ STANDARD SPECIFICATIONS

Refer to GS 01C31T02-01EN for Fieldbus communication type and GS 01C31T04-01EN for PROFIBUS PA communication type for the items marked with "\0."

SPAN AND RANGE LIMITS

_					
Measurement Span/Range		kPa	inH2O (/D1)	mbar (/D3)	mmH2O (/D4)
N 4	Span	1 to 100	4 to 400	10 to 1000	100 to 10000
M	Range	-100 to 100	-400 to 400	-1000 to 1000	-10000 to 10000
Н	Span	5 to 500	20 to 2000	50 to 5000	0.05 to 5 kgf/cm ²
	Range	-500 to 500	-2000 to 2000	-5000 to 5000	-5 to 5 kgf/cm ²

PERFORMANCE SPECIFICATIONS

Zero-based calibrated span, linear output, wetted parts material code SW for 3-inch flange flush type, and fill fluid code B.

For Fieldbus and PROFIBUS PA communication types, use caribrated range instead of span in the following specifications.

Specification Conformance

EJA-E series ensures specification conformance to at

Reference Accuracy of Calibrated Span

(includes terminal-based linearity, hysteresis, and repeatability)

Measurem	ent span	M
Reference	X≤span	±0.075% of Span
accuracy	X > span	±(0.025+0.005 URL/span)% of Span

X	10 kPa (40 inH2O)
URL (upper range limit)	100 kPa (400 inH2O)

Measurement span		Н		
Reference	X≤span	±0.075% of Span		
accuracy X > span		±(0.025+0.01 URL/span)% of Span		
X		100 kPa (400 inH2O)		
UR (upper rar	-	500 kPa (2000 inH ₂ O)		

Ambient Temperature Effects per 28°C (50°F) Change

Capsule	Effect
M	±(0.14% Span+0.028% URL)
Н	±(0.224% Span+0.056% URL)

Static Pressure Effects per 0.69 MPa (100 psi) Change

Span Effects

M and H capsules ±0.028% of span

Effect on Zero

M and H capsules ±0.007% of URL

Stability

±0.1 % of URL per 12 months

Power Supply Effects(Output signal code D and J) ± 0.005 % per Volt (from 21.6 to 32 V DC, 350 Ω)

Response Time (Differential pressure) "\"

M and H capsule: 120 ms (approximaté value at normal temperature)

When software damping is set to zero and including dead time of 45 ms (nominal)

Static Pressure Signal Range and Accuracy (For monitoring via communication or on indicator for BRAIN and HART communication type. Includes terminal-based linearity, hysteresis, and repeatability)

Range

Upper Range Value and Lower Range Value of the static pressure can be set in the range between 0 and Maximum Working Pressure (MWP*). The upper range value must be greater than the lower range value. Minimum setting span is 0.5 MPa (73 psi).

*: Maximum Working Pressure (MWP) is within flange rating pressure.

Accuracy

Absolute Pressure

1 MPa or higher: ±0.5% of span

Less than 1 MPa: ±0.5%×(1 MPa/span) of span

Gauge Pressure Reference

Gauge pressure reference is 1013 hPa (1 atm)

Note: Gauge pressure variable is based on the above fixed reference and thus subject to be affected by the change of atomospheric pressure.

□ FUNCTIONAL SPECIFICATIONS

Output "◊"

Two wire 4 to 20 mA DC output with digital communications.

BRAIN or HART FSK protocol are superimposed on the 4 to 20 mA signal.

Output range: 3.6 mA to 21.6 mA

Output limits conform to NAMUR NE43 can be preset by option code C2 or C3.

Failure Alarm (Output signal code D and J)

Output status at CPU failure and hardware error; Up-scale: 110%, 21.6 mA DC or more (standard) Down-scale: -5%, 3.2 mA DC or less

Damping Time Constant (1st order)

Amplifier damping time constant is adjustable from 0.00 to 100.00 s by software and added to response time.

Note: For BRAIN protocol type, when amplifier software damping is set to less than 0.5 s, communication may occasionally be unavailble during the operation, especially while output changes dynamically. The default setting of damping ensures stable communication.

Update Period "◊"

Differential pressure: 45 ms Static pressure: 360 ms

Zero Adjustment Limits

Zero can be fully elevated or suppressed, within the lower and upper range limits of the capsule.

External Zero Adjustment

External zero is continuously adjustable with 0.01% incremental resolution of span. Re-range can be done locally using the digital indicator with rangesetting switch.

Integral Indicator (LCD display, optional) "\"

5-digit numerical display, 6-digit unit display and bar graph.

The indicator is configurable to display one or up to four of the following variables periodically.; Measured differential pressure, differential pressure in %, scaled differential pressure, measured static pressure. See also "Factory Setting."

Self Diagnostics

CPU failure, hardware failure, configuration error, process alarm for differential pressure, static pressure or capsule temperature.

User-configurable process high/low alarm for differential pressure and static pressure is also available.

Signal Characterizer (Output signal code D and J) User-configurable 10-segment signal characterizer for 4 to 20 mA output.

SIL Certification

EJA-E series transmitters except Fieldbus and PROFIBUS PA communication types are certified in compliance with the following standards; IEC 61508: 2000; Part1 to Part 7 Functional Safety of Electrical/electronic/programmable electronic related systems; SIL 2 capability for single transmitter use, SIL 3 capability for dual transmitter use.

NORMAL OPERATING CONDITION (Optional features or approval codes may affect limits.)

Ambient Temperature Limits

-40 to 85°C (-40 to 185°F)

-30 to 80°C (-22 to 176°F) with LCD display (Note: The ambient temperature limits must be within the fill fluid operating temperature range, see table 1.)

Process Temperature Limits

High pressure side: See table 1.

Low pressure side: -40 to 120°C (-40 to 248°F)

Ambient Humidity Limits

0 to 100% RH

Working Pressure Limits

See table 1.

For atmospheric pressure or below, see figure 1.

Supply & Load Requirements

(Output signal code D and J. Optional features or approval codes may affect electrical requirements.)

With 24 V DC supply, up to a 550Ω load can be used. See figure 2.

Supply Voltage "◊"

10.5 to 42 V DC for general use and flameproof type. 10.5 to 32 V DC for lightning protector (option code /A.)

10.5 to 30 V DC for intrinsically safe, type n, or non-incendive.

Minimum voltage limited at 16.6 V DC for digital communications, BRAIN and HART

Load (Output signal code D and J)

0 to 1290Ω for operation

250 to 600Ω for digital communication

Communication Requirements "◊"

(Approval codes may affect electrical requirements.)

BRAIN

Communication Distance

Up to 2 km (1.25 miles) when using CEV polyethylene-insulated PVC-sheathed cables. Communication distance varies depending on type of cable used.

Load Capacitance

0.22 µF or less

Load Inductance

3.3 mH or less

Input Impedance of communicating device

10 k Ω or more at 2.4 kHz.

EMC Conformity Standards C€, €N200

■ MODEL AND SUFFIX CODES

Instruction

The model and suffix codes for EJA210E consist of two parts; a transmitter body section (I) and a flange mounting section (II). This specification sheet introduces these two parts separately. The transmitter body section is shown in one table, and the flange mounting section specifications are listed according to the flange size and the process connection style. First select the model and suffix codes of transmitter body section and then continue on one of the flange mounting section.

I. Transmitter body section

Model	Suffix Codes	Description

Option code	es			1	/□ Optional specification	0,7				

The "▶" marks indicate the most typical selection for each specification.

Example: EJA210E-DMS5G-912NN-EA14B1SE01-B/□

- *1: See Table 3 'Gasket contact surface' on Page 4.
- *2: Indicates the process temperature limit of high pressure side.
 The process temperature limit for low pressure side is –40 to 120°C.
- *3: The distance 'S' is extended in 30mm.
- *4: \(\Delta \) Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user's process fluids.

Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.

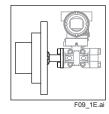

- *5: Forged version of the material may be used.
- 6: Specify always with option code /K2 or /K6.

The "marks" indicate the construction materials conform to NACE material recommendations per MR0175 (2003). Please refer to latest standards for details.

- Not applicable for amplifier housing code 2 and 3.
- Not applicable with color change option.
- *1: *2: *3: 316 or 316L SST. The specification is included in amplifier code 2.
- *4: *5: Applicable only when fill fluid code -D is specified.
- The unit of MWP (Max. working pressure) on the name plate of a housing is the same unit as specified by option code D1, D3, and D4.
- *6: Applicable for flush type (process connection style code W.)
- *7: Applicable for flushing connection ring code 0.
- *8: Applicable for output signal code D and J. The hardware error indicates faulty amplifier or capsule.
- Applicable for wetted parts material code SW, SE, WW, WE, and HW.
 - Consult Yokogawa in case gold-plated diaphragm is required for low pressure side.
- *10: Also see 'Ordering Information.'
- *11: Applicable for Low Pressure Side Process connection code 0 and 5.
- Applicable for Low Pressure Side Process connection code 1, 2, 3, and 4.
- *12: *13:
- Applicable for flushing connection ring code A, B, C, and D.
 The unit on the certificate is always MPa regardless of selection of option code D1, D3, or D4. *14: *15:
- A flushing connection ring will not be applied when conducting the pressure test or leak test.
- *16: Applicable for extended type (process connection style code E.)
- *17: Pure nitrogen gas is used for oil-prohibited use (option code K1, K2, K5, and K6.)

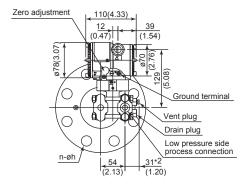

DIMENSIONS

Flush type

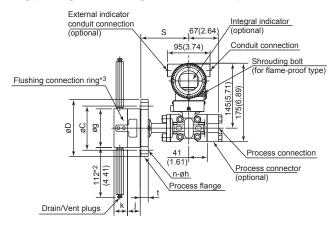

• No ring (Flushing connection ring code 0)

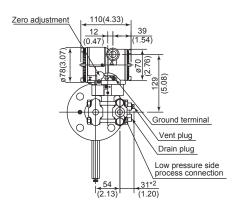

Unit: mm (approx.inch)

• With ring (Flushing connection ring code A, B, C, and D)

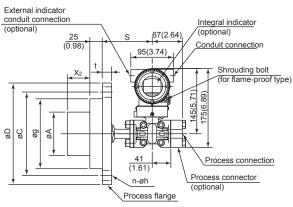

110(4.33)

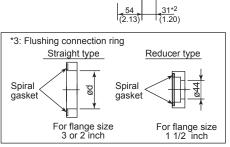

Zero adjustment

Extended type

	_	
	Fill fluid code	S
General use	B and P	113(4.45)
High temperature use	А	143(5.63)

Add 11 mm (0.36 inch) for Drain/vent plugs of flushing connection ring.

F10E.ai

Ground terminal

Low pressure side process connection

Vent plug Drain plug

^{*1:} Indicates inside diameter of gasket contact surface.
*2: When option code K1, K2, K5, or K6 is selected, add 15 mm(0.59 inch) to the value in the flange.

Unit: mm (approx.inch)

Process flange size: 4 inch (100 mm)

^{*1:} Indicates inside diameter of gasket contact surface.

Extension length (X2)

Extension code	X 2
1	50 (1.97)
3	100 (3.94)
5	150 (5.91)

• Terminal Configuration

• Terminal Wiring

SUPPLY +	Power supply and output terminal
CHECK +	External indicator (ammeter) terminal*1*2
<u>+</u>	Ground terminal

- *1: When using an external indicator or check meter, the internal resistance must be 10Ω or less.
- *2: Not available for fieldbus and PROFIBUS communication types.

F11E.ai

< Ordering Information > "\"

Specify the following when ordering

- 1. Model, suffix codes, and option codes
- 2. Calibration range and units:
 - Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. When reverse range is designated, specify LRV as greater than URV. When square root output mode is specified, LRV must be "0(zero)".
 - 2) Specify only one unit from the table, 'Factory setting.'
- 3. Display scale and units (for transmitters equipped with the integral indicator only) Specify either 0 to 100 % or 'Range and Unit' for engineering units scale: Scale range can be specified with range limit specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. Unit display consists of 6-digit, therefore, if the specified scaling unit excluding '/' is longer than 6-characters , the first 6 characters will be displayed on the unit display.
- HART PROTOCOL
 When output signal code is "J", specify the HART protocol revision "5" or "7".
- TAG NO (if required)
 Specified characters (up to 16 characters) are engraved on the stainless steel tag plate fixed on the housing.
- 6. SOFTWARE TAG (for HART only. if required) Specified characters (up to 32 characters) are set as "Tag" (the first 8 characters) and "Long tag"*1 (32 characters) in the amplifier memory. Use alphanumeric capital letters. When the "SOFTWARE TAG" is not specified, specified "TAG NO" is set as "Tag" (the first 8 characters) and "Long tag"*1 (16 characters) in the
 - *1: applicable only when HART 7 is selected.

amplifier memory.

Other factory configurations (if required)
 Specifying option code CA or CB will allow further configuration at factory. Following are configurable items and setting range.

[/CA: For HART communication type]

- 1) Descriptor (up to 16 characters)
- 2) Message (up to 30 characters)
- 3) Software damping (0.00 to 100.00 s)

[/CB : For BRAIN communication type]

1) Software damping (0.00 to 100.00 s)

< Factory Setting >

Tag number	As specified in order
Software damping *1	'2.00 s' or as specified in order
Calibration range lower range value	As specified in order
Calibration range upper range value	As specified in order
Calibration range units	Selected from mmH ₂ O, mmH ₂ O(68°F), mmAq* ² , mmWG* ² , mmHg, Pa, hPa* ² , kPa, MPa, mbar, bar, gf/cm ² , kgf/cm ² , inH ₂ O, inH ₂ O(68°F), inHg, ftH ₂ O, ftH ₂ O(68°F) or psi. (Only one unit can be specified.)
Display setting	Designated differential pressure value specified in order. (% or user scaled value.)
Static pressure display range	'0 to 25 MPa' for M and H capsule, absolute value. Measuring low pressure side.

- *1: To specify these items at factory, option code /CA or /CB is required.
- *2: Not available for HART protocol type.
