EJA438E/Z  
Diaphragm Sealed  
Gauge Pressure Transmitter  
(Inner Diaphragm type)

DPharp EJA™

Diaphragm seal is used to prevent process medium from entering directly into the pressure-sensing assembly of the pressure transmitter, it is connected to the transmitter using capillary filled with fill fluid.

Inner diaphragm type can be installed to small size flange which is 1 inch, 3/4 inch or 1/2 inch.

And the performance is the same as 2 inch, because it is used the diaphragm size same as 2 inch.

EJA438E Diaphragm Sealed Gauge Pressure Transmitters can be used to measure liquid, gas, or steam pressure. EJA438E outputs a 4 to 20 mA DC signal corresponding to the measured pressure. It also features quick response, remote setup and monitoring via BRAIN or HART communications, and diagnostics and optional status output for pressure high/low alarm. The multi-sensing technology provides the advanced diagnostic function to detect such abnormality as an impulse line blockage. Foundation Fieldbus and PROFIBUS PA protocol types are also available.

## □ FUNCTIONAL SPECIFICATIONS

### Output “◇”

Two wire 4 to 20 mA DC output with digital communications. BRAIN or HART FSK protocol are superimposed on the 4 to 20 mA signal.

Output range: 3.6 mA to 21.6 mA

Output limits conform to NAMUR NE43 can be preset by option code C2 or C3.

### Failure Alarm (Output signal code D and J)

Output status at CPU failure and hardware error;

Up-scale: 110%, 21.6 mA DC or more (standard)

Down-scale: -5%, 3.2 mA DC or less

### Damping Time Constant (1st order)

Amplifier damping time constant is adjustable from 0.00 to 100.00 s by software and added to response time.

Note: For BRAIN protocol type, when amplifier software damping is set to less than 0.5 s, communication may occasionally be unavailable during the operation, especially while output changes dynamically. The default setting of damping ensures stable communication.

### Update Period “◇”

Pressure: 45 ms

### Zero Adjustment Limits

Zero can be fully elevated or suppressed, within the lower and upper range limits of the capsule.

### External Zero Adjustment

External zero is continuously adjustable with 0.01% incremental resolution of span. Re-range can be done locally using the digital indicator with range-setting switch.

### Integral Indicator (LCD display, optional) “◇”

5-digit numerical display, 6-digit unit display and bar graph.

The indicator is configurable to display one or up to three of the following variables periodically:;

Pressure in %, scaled pressure, measured pressure.  
See also "Factory Setting."

### Self Diagnostics

CPU failure, hardware failure, configuration error, process alarm for pressure or capsule temperature. User-configurable process high/low alarm for pressure is also available.

### Signal Characterizer (Output signal code D and J)

## ■ MODEL AND SUFFIX CODES

### ● Instruction

The model and suffix codes for EJA438E consist of two parts; a transmitter body section (I) and a diaphragm seal section (II). This specification sheet introduces these two parts separately. The transmitter body section is shown in one table, and the diaphragm seal section specifications are listed according to the process connection style. First select the model and suffix codes of transmitter body section and then continue on one of the diaphragm seal section.

### < Ordering Information > “◇”

Specify the following when ordering

1. Model, suffix codes, and option codes
2. Calibration range and units:
  - 1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. When reverse range is designated, specify LRV as greater than URV.
  - 2) Specify only one unit from the table, ‘Factory setting.’
3. Display scale and units (for transmitters equipped with the integral indicator only)
 

Specify either 0 to 100 % or ‘Range and Unit’ for engineering units scale:

Scale range can be specified with range limit specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. Unit display consists of 6-digit, therefore, if the specified scaling unit excluding ‘/’ is longer than 6-characters , the first 6 characters will be displayed on the unit display.
4. HART PROTOCOL
 

When output signal code is “J”, specify the HART protocol revision “5” or “7”.
5. TAG NO (if required)
 

Specified characters (up to 16 characters) are engraved on the stainless steel tag plate fixed on the housing.
6. SOFTWARE TAG (for HART only. if required)
 

Specified characters (up to 32 characters) are set as “Tag” (the first 8 characters) and “Long tag”<sup>\*1</sup> (32 characters) in the amplifier memory. Use alphanumeric capital letters.

When the “SOFTWARE TAG” is not specified, specified “TAG NO” is set as “Tag” (the first 8 characters) and “Long tag”<sup>\*1</sup> (16 characters) in the amplifier memory.

<sup>\*1:</sup> applicable only when HART 7 is selected.
7. Other factory configurations (if required)
 

Specifying option code /CA or /CB will allow further configuration at factory. Following are configurable items and setting range.

[/CA : For HART communication type]

  - 1) Descriptor(upto 16 characters)
  - 2) Message (upto 30 characters)
  - 3) Software damping (0.00 to 100.00 s)

[/CB : For BRAIN communication type]

  - 1) Software damping (0.00 to 100.00 s)
8. Process fluid temperature for zero compensation  
(When /R is specified)

### < Factory Setting > “◇”

Tag Number	As specified in order
Software damping <sup>*1</sup>	‘2.00 s’ or as specified in order
Calibration range lower range value	As specified in order
Calibration range upper range value	As specified in order
Calibration range units	Selected from mmH <sub>2</sub> O, mmH <sub>2</sub> O(68°F), mmAq <sup>*2</sup> , mmWG <sup>*2</sup> , mmHg, Pa, hPa <sup>*2</sup> , kPa, MPa, mbar, bar, g/cm <sup>2</sup> , kgf/cm <sup>2</sup> , inH <sub>2</sub> O, inH <sub>2</sub> O(68°F), inHg, ftH <sub>2</sub> O, ftH <sub>2</sub> O (68°F) or psi. (Only one unit can be specified)
Display setting	Designated value specified in order, absolute value. (% or user scaled value.)

<sup>\*1:</sup> To specify these items at factory, /CA or /CB option is required.

<sup>\*2:</sup> Not available for HART protocol type.
